Aditya Pande

Backend & DevOps Engineer

aditya.dev.pande@gmail.com | +91 7498463025 | LinkedIn | GitHub

Professional Summary

Final-year B.Tech Artificial Intelligence student with practical experience in **Backend Engineering**, **DevOps**, and **Cloud Infrastructure**. Built and maintained an **end-to-end production-grade e-commerce platform**, contributing across system architecture, backend development, cloud deployment, infrastructure optimization, production debugging, and ongoing maintenance. Experienced in developing scalable REST APIs, automating CI/CD pipelines, containerizing applications with Docker, managing Linux servers, and deploying workloads on AWS. Strong understanding of production deployments, system reliability, cloud-native technologies, and building scalable software systems with a focus on automation, maintainability, and engineering best practices.

Technical Skills

Backend Engineering	Node.js, Express.js, React.js, Next.js, MongoDB, REST APIs, JWT Authentication, Firebase, Three.js (React Three Fiber), GSAP, Git
Production Infrastructure	AWS (EC2, IAM, VPC, S3, ECR, EKS), Linux, Docker, Kubernetes, Helm, Terraform, Nginx, SSL/TLS, Reverse Proxy, DNS
DevOps Engineering	CI/CD, GitHub Actions, Jenkins, Infrastructure as Code (Terraform), Containerization, Container Orchestration, Multi-Tier Architecture, Microservices, Production Deployment, Infrastructure Optimization, Cloud Cost Optimization, SonarQube,

Experience

Backend & DevOps Intern Dec 2024 – Jun 2025

SyncSaS Technologies (Remote)

- Developed scalable backend services and RESTful APIs using Node.js, Express.js, and MongoDB following modular architecture principles.
- Worked with Docker, AWS, Linux, and Nginx to deploy, configure, and maintain cloud-based production environments.
- Implemented CI/CD workflows using GitHub Actions and Jenkins to automate application build and deployment processes.
- Gained hands-on experience in cloud infrastructure, system architecture, production debugging, infrastructure optimization, and deployment lifecycle management.
- Collaborated with engineering teams to troubleshoot production issues, optimize application performance, and improve deployment reliability.

Software Engineer Jan 2025 – Present

- Independently designed, developed, deployed, and maintained an end-to-end production-grade web application from initial planning to live production.
- Worked directly with stakeholders to gather business requirements, define project scope, prepare quotations, communicate progress, and deliver production-ready features.
- Designed scalable system architecture and implemented frontend, backend, authentication, payment integration, administrative modules, and database architecture.
- Built and managed production infrastructure using AWS, Docker, Linux, Nginx, SSL, DNS, and automated deployment workflows.
- Managed and optimized production infrastructure through cloud resource optimization, deployment automation, performance tuning, post-deployment maintenance, production debugging, and continuous feature enhancements.

Projects

1. Soliva Guard – Production E-Commerce Platform Live Demo

React, Node.js, Express.js, MongoDB, Docker, AWS, Nginx, GitHub Actions

- Built and deployed a production-grade e-commerce platform with secure authentication, payment integration, order management, and an admin dashboard, delivering a complete end-to-end shopping experience.
- Designed scalable backend architecture and automated containerized deployments using Docker, GitHub Actions, AWS, Nginx, and SSL to ensure reliable production releases.
- Maintained the live application by resolving production issues, optimizing infrastructure and cloud resources, and continuously improving performance, security, and deployment reliability.

2. Multi-Tier Kubernetes Deployment GitHub

Kubernetes, Docker, Helm, Jenkins, AWS, GitHub Actions

- Deployed a production-style multi-tier microservices application on Kubernetes by containerizing services and orchestrating workloads with Deployments, Services, and Ingress.
- Automated CI/CD pipelines to build Docker images, perform rolling updates, and streamline application deployments with minimal downtime.
- Improved scalability and reliability by implementing service discovery, load balancing, health checks, and infrastructure automation following cloud-native best practices.

3. Interactive 3D Shopping Experience GitHub

React.js, Three.js, React Three Fiber, GSAP

- Developed an immersive 3D e-commerce experience featuring interactive product visualization, smooth animations, and real-time user interactions.
- Engineered a responsive and high-performance frontend using React, Three.js, and GSAP while optimizing rendering, asset loading, and animation performance.
- Enhanced the online shopping experience through modern UI/UX principles, delivering seamless navigation and engaging product exploration across devices.

Education

Bachelor of Technology (Artificial Intelligence)
G. H. Raisoni College of Engineering and Management
2022–2026

Certifications

- **AWS Cloud Practitioner Essentials** View Credential
- **AWS Certified DevOps Engineer – Professional (Exam Preparation)** View Credential
- **AWS Certified DevOps Engineer – Professional (Domain 1 Review)** View Credential
- **AWS Certified DevOps Engineer – Professional (Domain 2 Review)** View Credential
- **AWS Certified DevOps Engineer – Professional (Domain 3 Review)** View Credential

Core Competencies

Backend Development • DevOps • AWS • Docker • Kubernetes • CI/CD • Linux • Infrastructure Automation • Cloud Computing
